Alaska's First

01

Mobilization of CNG using natural gas-powered freightliners hauling 175MCF CNG tube trailers

02

New CNG station built on the Norgasco pad to make CNG available for local motor fuel

# Utility and Motor Applications

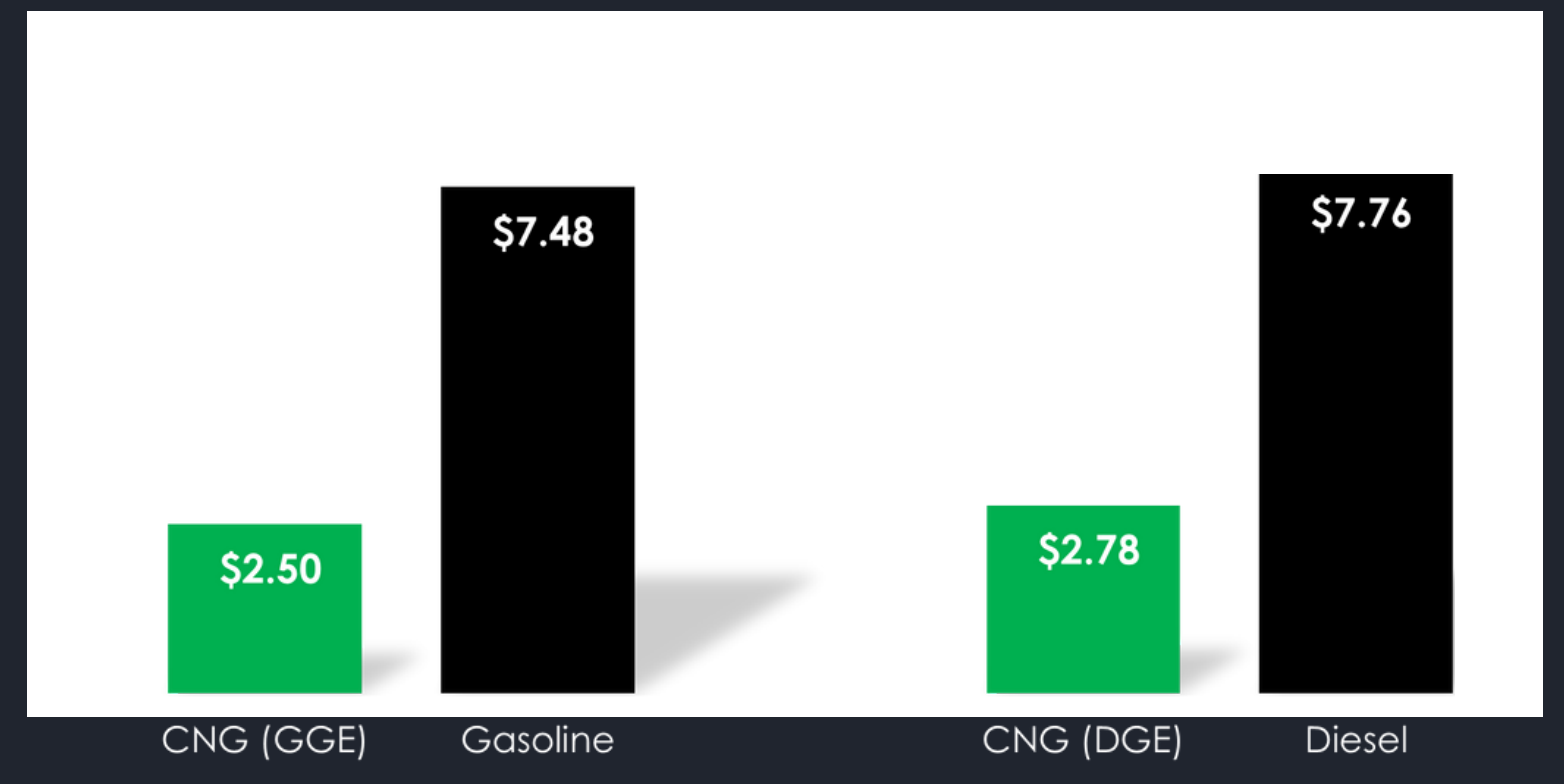

## 01. Utility

Where pipeline construction is uneconomic due to distance from supply or limited demand time, off-pipeline distribution (OPD), or "virtual pipeline", provides a solution for clients looking for a greener, cheaper energy source.

## 02. Motor

As the cost of road fuel continues to increase, compressed natural gas maintains a competitive edge.

Utility level service

**Delivered:** compressed natural gas can be trucked to your site and coupled with a pressure let down skid to provide natural gas service equivalent to pipeline service availability.

**Alkaid #2 Pad:**  
16 Miles South of  
Deadhorse and 300  
yards off the  
Dalton Highway
